

# FITTING INSTRUCTIONS

## Aluminium Wall Brackets WB450, WB895 & WB4500

These aluminium wall brackets are recommended as an economical way to display literature for larger displays.

It is recommended that a maximum of four (4) holders be hung vertically from any of the wall brackets. (otherwise the gap between the wall and the bottom holder becomes too large ie. the distance off the wall).

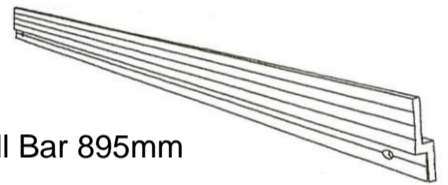

If more holders are required, just fix another wall bracket below the top bank of holders and hang the extras from that bracket.

For multiple wall mounted applications it is recommended that a universal base bracket (VS80) be used on the third or fourth holder. (This allows the bottom of the unit to rest against the wall, thereby stabilising the whole unit).

- . To affix the bar, use the predrilled holes or drill holes in the bar to suit studs or bricks, etc.
- . Determine if the bar is level.
- . 6g Pan head wood screws are recommended for fixing to timber.
- . 6g Pan head self tapping screws in conjunction with suitable plastic plugs are recommended for fixing to Masonry or Plasterboard.
  - . To clip the holders together, place the back of the front holder onto the front surface of the second holder and simply pull the front holder down until they clip together.
- . Finally place the Universal base stand (VS80) into the third or fourth holder
